

1) Key information to ask in the onboarding flow. The ones which say health records are to be extracted from health records.

Field	Type	Notes
name	string	Pet's name (e.g. Bruno)
breed	string	Used for breed-specific recommendations
dob	DD/MM/YYYY string	Age computed at runtime
gender	string	Male / Female
pincode	string	Used for vet/lab proximity matching
parent	string	Owner name for WhatsApp personalisation
grooming	array	last bath & grooming
nutrition	object	currentFood, supplements, homemade items,
healthRecords.vaccines[]	array	id, name, mandatory bool, freqMonths, lastGiven
healthRecords.deworming	object	lastDone, nextDue, status enum
healthRecords.fleaTick	object	lastDone, nextDue, status enum
healthRecords.checkups	array	Blood test, urine, fecal, xray (if diagnostics are extracted without any condition)
healthRecords.conditions[]	array	if any Chronic/episodic conditions found with medications and monitoring checks-
healthRecords.contacts]	array	Vet name, groomer name if there

2) Database of nutrition information by regular market foods (from food labels)- - I have provided a dummy database

3) Database for flea/tick, deworming and other health conditions
flea/tick - see the tabs in dummy database

3) Guardrails for Nudges: provided in business logic document

Priority: mandatory first and then optional. Current active first as per health records and then recommendation. Recommendations based on health records as generated by AI agent. These will be nudged on whatsapp and also show on webapp.
